

# Client Desired Requirements – Bryce

From a client's perspective, I would like to see the following features contained on the web based system.

- Functionality of google maps embedded
- Icons on maps that help show locations
- A key to describe icons
- Ability to turn certain icons off and on
- GPS assistance (either on the webservice or linked out to another service)
- Link application to phone
- Link social media to web system
- Have recommendations based on filters (for example rating, popularity, price)
- Remember my username
- A contact numbers
- Links to different locations websites (for example museum links to museum website)
- Save locations
- Show path I have been
- Have a weather suggestion based on the location
- Calendar that can add events/ make notes
- An events rundown for day / week / month / year
- Discounts, coupons, vouchers on application

Although all won't be feasible these are some of the desired features that could be found on the web based system.
